EDUCATION

VIT Bhopal University

Expected May 2027

Bachelor of Technology in Computer Science and Engineering (Cybersecurity and Digital Forensics)

CGPA: 8.77/10 | Class XII: 88% | Class X: 94.6%

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL

Core CS: DBMS, Operating Systems, Computer Networks

Tools & Frameworks: Git, Wireshark, GitHub, Docker, OpenCV, FastAPI, Redis, MySQL

Cloud & Security: AWS Fundamentals, Network Security, Cryptography, Secure Coding, Vulnerability Assessment, System Administration, Blockchain Fundamentals, LLM Security & Prompt Injection Defense

PROFESSIONAL EXPERIENCE

Inflynx Technologies Pvt Ltd — Security Analyst Intern | Remote

May 2026 – Aug 2026

- Monitored network traffic, system logs, and security alerts to identify potential threats and anomalies, escalating validated incidents in line with established response protocols.
- Conducted vulnerability assessments and security audits across internal systems, documenting findings and recommending remediation measures to strengthen the organization's overall security posture.
- Assisted in developing and refining security policies and incident response procedures, collaborating with cross-functional teams to improve organizational cybersecurity readiness.

PROJECTS

LLM Jailbreak Guard

Aug 2026 – Present

Llama Guard 3, NeMo Guardrails, FastAPI, Redis |  [GitHub](#)

- Building an inline filtering proxy that sits between user input and a production LLM, sanitizing malicious input patterns and isolating fixed system instructions from user prompts through secure templating.
- Implementing a lightweight adversarial classifier gate to catch jailbreak heuristics such as roleplay evasion and translation bypasses, plus an output backstop filter to block leaked credentials or system prompts.
- Deploying the proxy on FastAPI with Redis-backed caching to minimize latency overhead while sustaining real-time filtering across concurrent user sessions.

Online Learning Platform

Jan 2026 – Apr 2026

Java, MySQL, HTML, CSS |  [GitHub](#)

- Built a full-stack online learning platform covering course management, student enrollment, and progress tracking, backed by a normalized relational MySQL schema designed for efficient querying across related course and user entities.
- Designed responsive, role-based UI screens for students and instructors using HTML and CSS, and implemented secure session handling to protect user data and restrict access to authorized roles only.
- Added course content upload, quiz creation, and automated progress-report features, giving instructors clear visibility into student performance and helping students track their own learning progress in real time.

Video-in-Video Steganography

Feb 2025 – May 2025

OpenCV, Cryptography |  [GitHub](#)

- Built a secure video steganography system that embeds one video inside another using frame-level embedding, preserving playback quality of the carrier video across varying resolutions and bitrates.
- Applied encryption to the embedded payload so hidden content resists extraction without the correct key, addressing secure multimedia transmission over untrusted channels.
- Tuned the embedding algorithm to balance payload capacity against video quality, keeping distortion in the carrier video imperceptible even after compression.

CERTIFICATIONS

- Google IT Support Professional Certificate — Technical Support, Networking, System Administration (2026)
- AWS Technical Essentials — EC2, S3, IAM, Cloud Fundamentals (2025)
- The Bits and Bytes of Computer Networking — TCP/IP, DNS, Routing, Network Security (2025)
- Blockchain and its Applications — Smart Contracts, Distributed Ledger (2025)
